

Btrack Launches “Simple” Real Time Tracking Solution

Btrack Solutions has launched a simple tracking system designed to be less demanding on management time but without a reduction in mapping quality. Andy Walker Btrack’s Head of Sales & Marketing comments, “Many operators simply want to know where their vehicles are at any given time and where they have been.” “Easilocator is designed as an alternative for simple tracking not to compete with more comprehensive systems.” “We recognise there can be financial benefits for investing in a more comprehensive system, however not every operator has the time to learn the advanced features which are essential for some systems to justify their expense.” “Easilocator still allows operators to make significant savings but training and familiarisation takes minutes not hours.” “With the added benefit that Easilocator is manufactured by us in the UK, we can ensure consistent long term support for our products. “
